WMZ12A (I / II) Series

PTC Thermistors 正温度系数热敏电阻器

For Over Current Protection 用于过流保护

产品简介

PRODUCTS BRIEF INTRODUCTION

WMZ12A (I / II) 系列 PTC 热敏电阻器系新一代过流保护器件，其特点是无触点、无噪音、无火花、自动保护、自动复原，可重复使用，其安全性能符合美国 UL1434 标准要求。

WMZ12A (I / II) 系列 PTC 热敏电阻器主要用于电子镇流器/节能灯/适配器/充电器/电度表/万用表/通讯设备/微电机等过流保护，如应用示例所示。当被保护电路处于正常状态时，流过 PTC 热敏电阻器 R_t 的电流小于其最大不动作电流 I_N ， R_t 处于低阻态，不会影响被保护电路正常工作；当被保护电路遇过流（电流大大超过其动作电流 I_T 令 R_t 急剧发热）等异常状况时， R_t 骤然跃入高阻态，使被保护电路避免受到损坏。当异常状况消失，温度、电流回复正常后， R_t 自动回复至低阻态，被保护电路亦回复至正常工作状态。

WMZ12A (I / II) 系列之选型主要考虑 R_t 的电流特性和 R_t 环境温度，其最大不动作电流 I_N 应适度大于被保护电路的额定工作电流，以能及时响应又不会误动作为准则。与此同时，应特别注意 R_t 之动作/不动作特性与工作环境温度密切相关， I_N 和 I_T 随工作环境温度 T_A 升高而降低，如图 II 所示。

WMZ12A (I / II) Series is the new generation of components for over current protection. Its safety characteristics passed the testing and meet the requirements of UL1434. It can do protection and recovery automatically and repetitively without contacting spot, noise and spark.

WMZ12A(I / II) Series PTC Thermistor is designed specially for over current protection of the Ballast / CFL / Adaptor / Charger / Watt-hour Meter / Multimeter / Telecom / Micromotor etc, as show as the example of application. When the circuit protected is at normal state,

current through the PTC thermistor will be lower than its Max. Non-operating Current (I_N). At this time R_t is at low-resistance state, and it won't affect the normal work of the circuit protected. While abnormal things (such as over current) happen, the current will be much higher than its Trip Current (I_T), and then R_t will change into high-resistance state very quickly. So the circuit protected will be at open state and non-damaged. After the abnormal things disappear and the temperature & the current recover to normal state, R_t will return to low-resistance state automatically and the circuit protected will recover to normal operating state.

R_t 's current characteristics is the most important thing to be considered when make a choice of WMZ12A (I/II) series. Its Max. Non-operating Current shall be reasonably higher than rated operating current through the circuit protected and the criterion is that R_t can respond in time and won't trip by mistake. Furthermore, another thing must be especially noticed is: R_t 's Max. Operating / Non-operating characteristics is closely correlative with the ambient temperature. I_T & I_N will decrease while the ambient temperature increases, as show as Figure II.

(1) Series 系列: WMZ12A (I / II / III) 过流、过热、过压保护系列热敏电阻

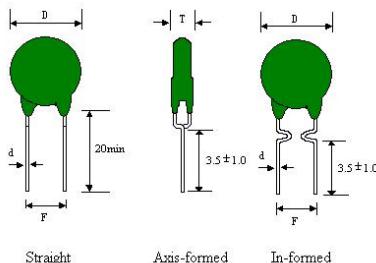

(2) Curie Temp. 居里温度: 50 - 50°C 75 - 75°C 85 - 85°C 105 - 105°C 120 - 120°C

(3) Max Diameter 外径 Dmax: S - Φ4.5 A - Φ6.5 B - Φ8.5 LB-Φ10
M-Φ11.5 SL-Φ14.5

(4) Rated Zero Power Resistance 额定零功率电阻 RN: 1R0-1Ω 4R7-4.7Ω
15R-15Ω 101-100Ω

(5) Tolerance of Resistance 电阻值允差: V - ±25% M - ±20%
K - ±10%

(6) Shape of Leads 引线形状: U - In-formed 内弯 S - Straight 直线
A - Axis-formed 轴弯

(7) Leads material 引线材质: U: Cu 铜线 (P: Cp 钢线)

(8) Max. Non Operating Current 最大不动作电流: 200-200mA 060-60mA 008-8mA

(9) Packing Type 包装形式: B - Bulk 散装 (A - Ammo 条带 R - Reel 盘带)

(10) Leads Length 引线长度: 5: 5mm (10: 10mm)

(11) Coating Material 包封材料: S-Black Silicone 黑色硅树脂 G-Green Silicone 绿色硅树脂

P-PF Resin 酚醛树脂 E-Epoxy 改良树脂 N-NoCoating 不包封

(12) Leads Diameter 引线直径: 5-Φ0.5 6-Φ0.6 8-Φ0.8 1-Φ1.0

(13) Leads Distance 引线间距: A-2.5 B-5.0 C-7.5 D-10.0
